though Boost.Asio can process any kind of data asynchronously, it is mainly used for network programming. This is because Boost.Asio supported network functions long before additional I/O objects were added. Network functions are a perfect use for asynchronous operations because the transmission of data over a network may take a long time, which means acknowledgments and errors may not be available as fast as the functions that send or receive data can execute. Chapter 32. Boost.Asio - Network programming Network programming is inherently complex and doing it with a low-level C-style socket API makes it even more complex and error prone.

Boost.Asio is an O-O C++ library that is, just like raw Sockets API, built around the concept of a socket.

Roughly speaking, Boost.Asio wraps raw Sockets API and provides the developer with O-O interface to it. Boost.Asio C++ Network Programming
