CHAPTER NINE- Molecular Geometry and Bonding Theories Sections 9.1 through 9.6 Only 9.1 Molecular Shapes. •Lewis structures give atomic connectivity: they tell us which atoms are physically connected to which atoms. •The shape of a molecule is determined by its bond angles. •The angles made by the lines joining the nuclei of the atoms in a

molecule are the bond angles. STUDY GUIDE AP Chemistry CHAPTER NINE- Molecular Geometry ... Molecular geometries (linear, trigonal, tetrahedral, trigonal bipyramidal, and octahedral) are determined by the VSEPR theory. A table of geometries using the VSEPR theory can facilitate drawing and understanding molecules. The table of molecular geometries can be found in the first figure. The second figure serves as a visual aid for the table. Molecular Geometry | Boundless Chemistry Molecular Geometry. Get help with your Molecular geometry homework.
