Bohr believed that uncertainty was fundamental to the quantum nature of wave-particle duality. Bohr felt the electron was both a wave and a particle, but that no experiment could measure both at the same time. He called his principle complementarity. The Bohr-Einstein debates were a series of public disputes about quantum mechanics between Albert Einstein and Niels Bohr. Their debates are remembered because of their importance to the philosophy of science. An account of the debates was written by Bohr in an article titled "Discussions with Einstein on Epistemological Problems in Atomic Physics". Quantum Einstein Bohr and the Great Debate About the Quantum mechanics is the science of the very small. It explains the behavior of matter and its interactions with energy on the scale of atomic and subatomic particles. By contrast, classical physics explains matter and energy only on a scale familiar to human experience, including the behavior of astronomical bodies such as the Moon. Einstein Vs. the New Generation of Quantum Theorists Here comes Quantum Mechanics In 1897 the electron was first identified as a particle. Neils Bohr noticed that when atoms agitate under heat, the electrons jump to higher orbits, but on their way back down, there are spaces in between that they never land on. Although he was the one who established the quantum of energy and matter (see my Blog Einstein vs Planck), Einstein pitted himself in a running debate against Niels Bohr's emerging interpretation of quantum physics that had, in Einstein's opinion, severe deficiencies. The Solvay Debates: Einstein versus Bohr | Galileo Unbound Many of Einstein's quantum ideas were incorporated into a new model of the atom developed by the Danish physicist Niels Bohr in the first decades of the century. Bohr explained that electrons occupy only certain well-defined orbits around a dense nucleus of protons and neutrons. Albert Einstein: Quantum Theory |

SparkNotes In 1913, Niels Bohr proposed a theory for the hydrogen atom based on quantum theory that energy is transferred only in certain well defined quantities. Electrons should move around the nucleus but only in prescribed orbits.
