A lever is a board or bar that rests on a turning point. This turning point is called the fulcrum. An object that a lever moves is called the load. Forces & Motion with Simple Machines A lever is a simple machine that consists of a rigid object (often a bar of some kind) and a fulcrum (or pivot). Applying a force to one end of the rigid object causes it to pivot about the fulcrum, causing a magnification of the force at another point along the rigid object. 6 Kinds of Simple Machines - ThoughtCo Machines deliver a certain type of movement to a desired location from an input force applied somewhere else. Some machines simply convert one type of motion to another type (rotary to linear). While there is a seemingly endless variety of machines, they are all based upon simple machines. Simple machines include inclined planes, levers, wheel and axle, pulleys, and screws. It is important to remember that all machines are limited in their efficiency.
